

Current and Emerging Threats to Coastal and Marine Biodiversity Conservation...

...experiences from Australia's Great Barrier Reef

*Presentation at Wildlife Institute of India, Dehradun
3rd March 2017*

Jon C. Day

ARC Centre for Coral Reef Studies, James Cook University, Australia

- **GBRWHA = 348,000 sq km**
- **~ 2,300 km long**
- **Marine Park = 99% of the WHA**

Significant marine habitats

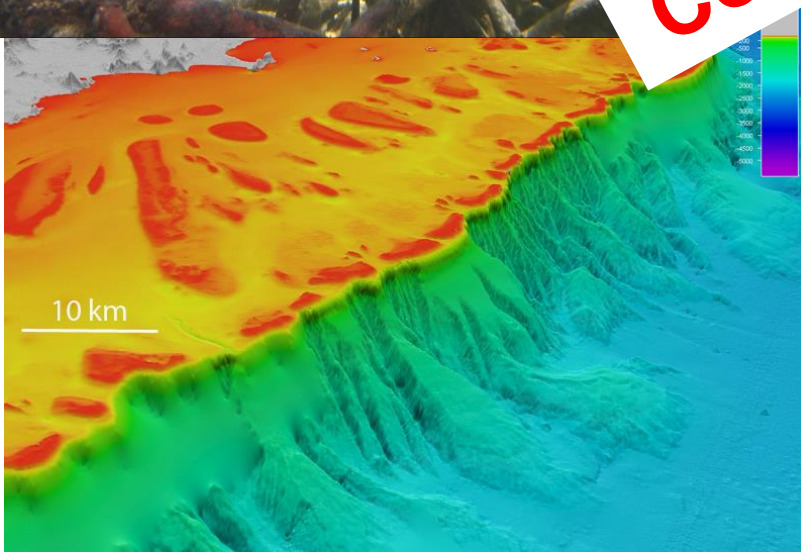

**Coral reefs ~
10% of GBR
Marine Park**

Significant marine habitats

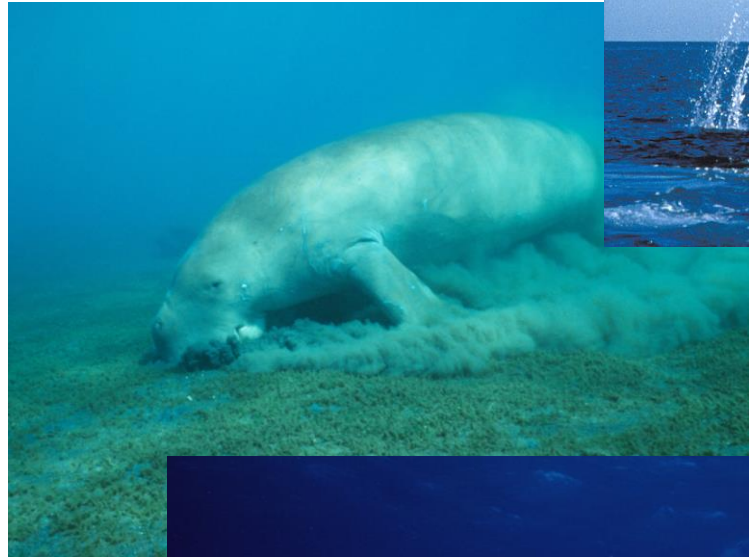

Connectivity

As well as coral reefs:

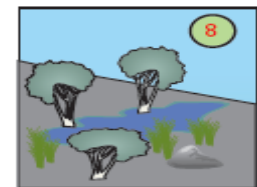

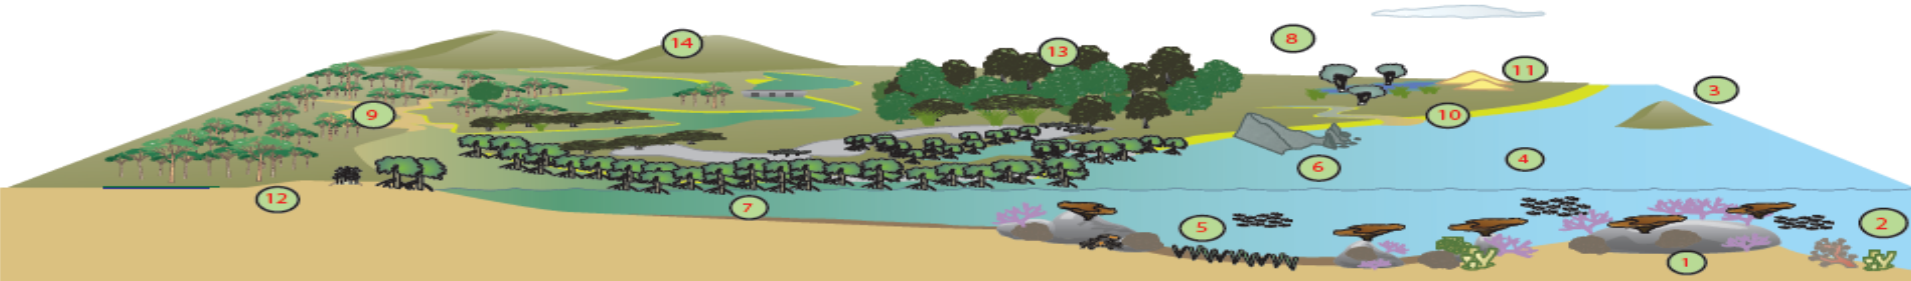

- mangroves
- seagrass beds (*shallow & deepwater*)
- sandy and muddy bottom communities
- continental slope (15%)
- deep oceanic waters (16%)

Iconic Species

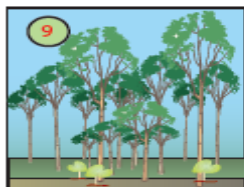

Important islands
(continental/high islands,
sand cays, mangroves)
.... and inter-tidal
areas

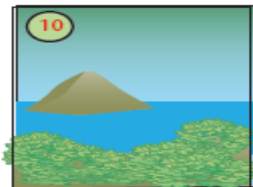

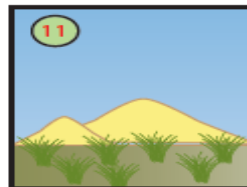

FRESHWATER WETLANDS

FOREST FLOODPLAIN

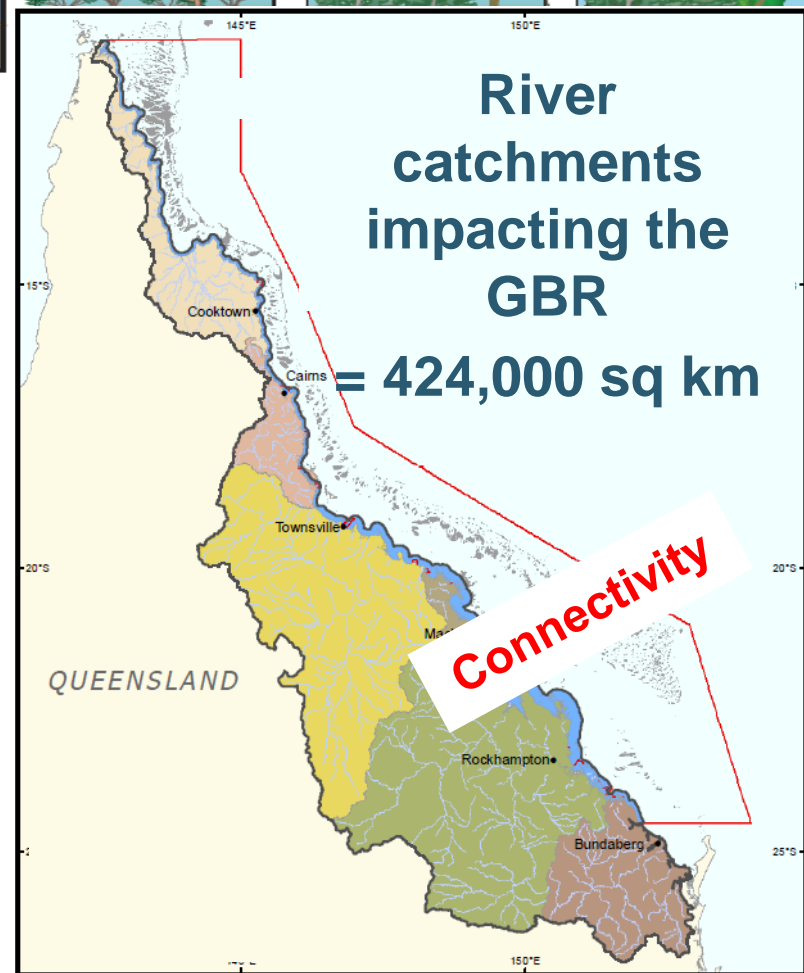

HEATH & SHRUBLANDS

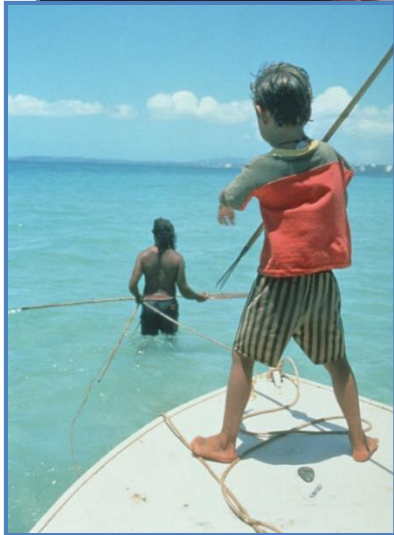

GRASSLANDS

Significant coastal habitats

GBR is worth ~AUD \$6 billion per annum

Changing management challenges for the GBR over last 50 years

1970s

- limestone mining
- oil drilling

1980s

- crown of thorns
- increasing tourism

1990s

- fishing (trawling)
- threats to biodiversity

2000s

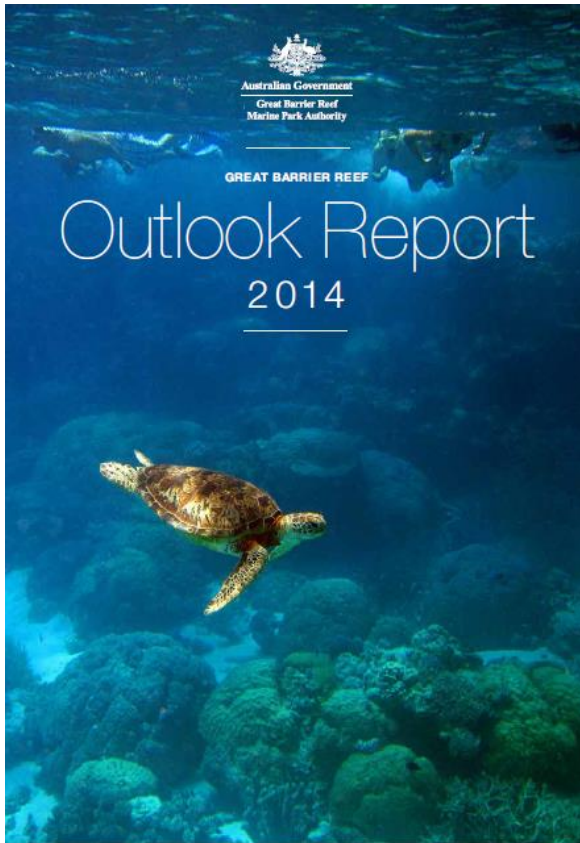

- water quality issues
- coastal development
- fishing (netting)

current

Numerous challenges
.....

GBR Marine Park Act - 1975

GBR Outlook Report 2014

“Climate change, poor water quality from land-based run-off, impacts from coastal developments and some remaining impacts of fishing remain the four major threats to the future vitality of the Great Barrier Reef”

(Executive summary, p. v)

Risk matrix for 41 risks in GBR

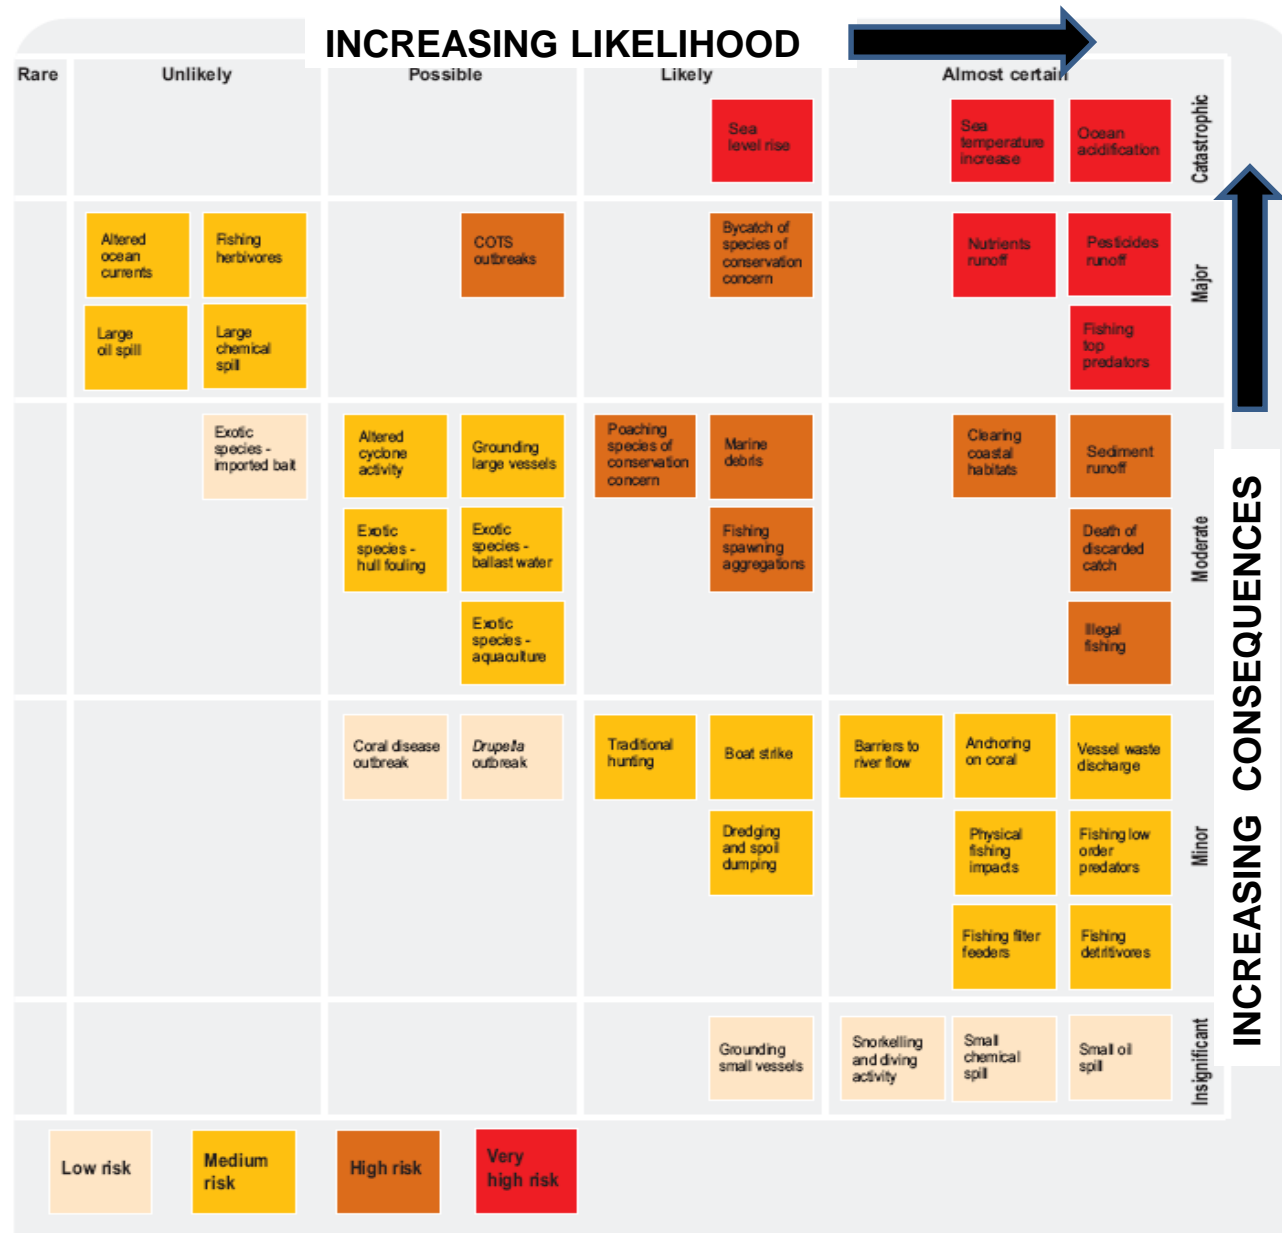

(from Outlook Report, 2009)

Likelihood

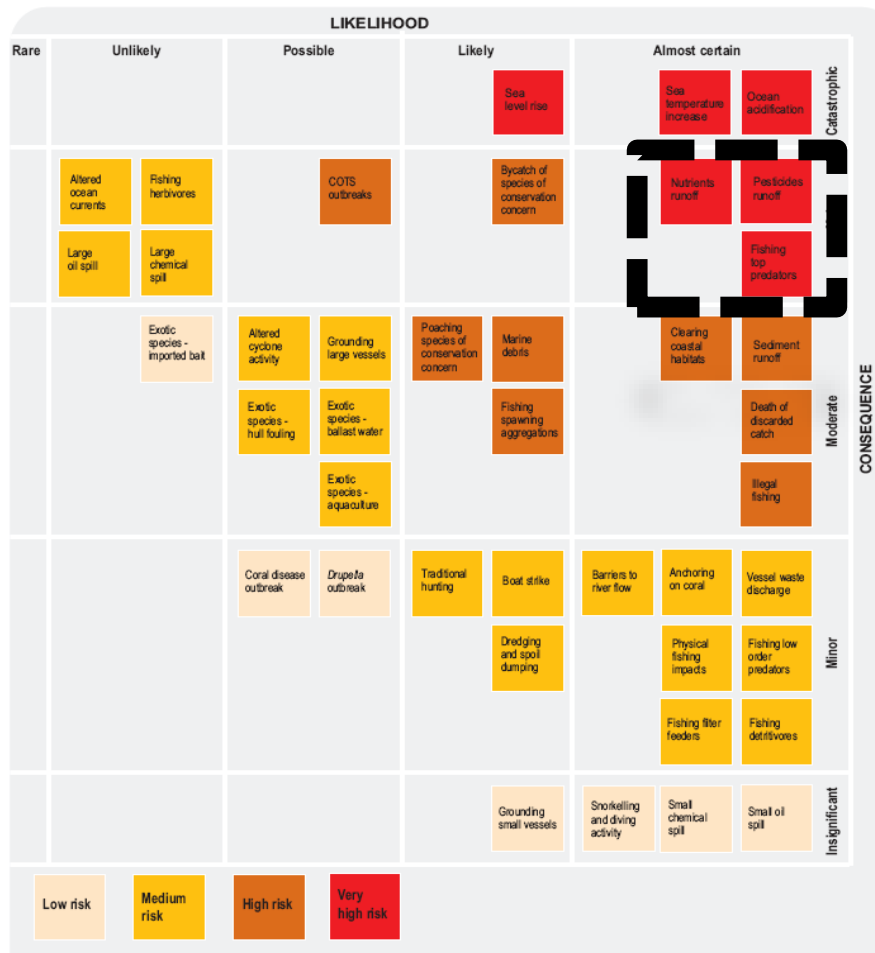

(Rare Almost
Certain)

Consequence

(Insignificant
Catastrophic)

Risk matrices

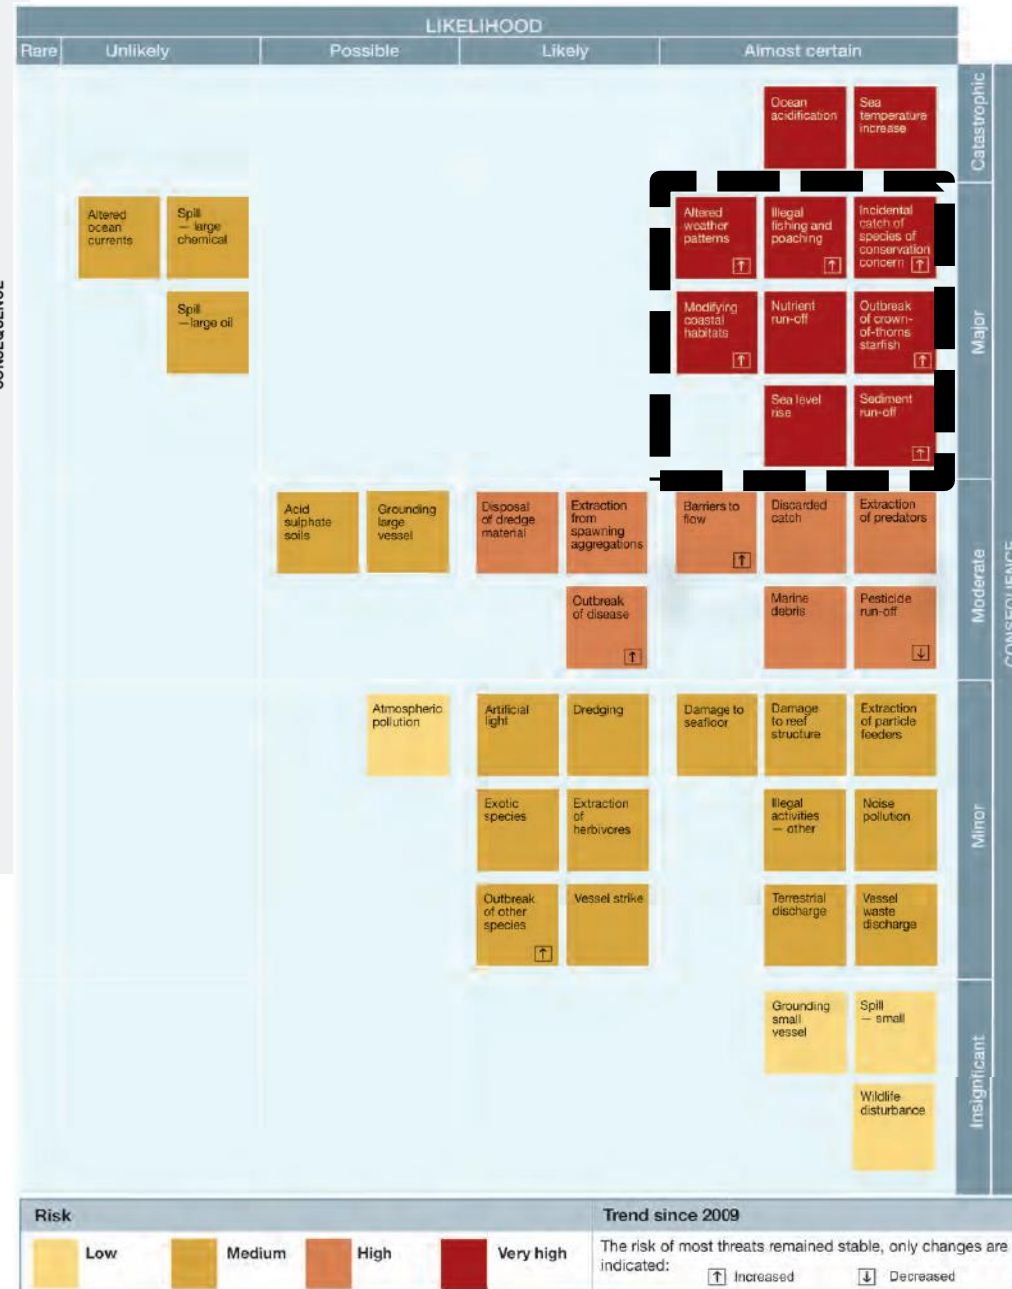

Outlook Report 2009

Almost certain, Major consequence - 3 High risks

Outlook Report 2014

Almost certain, Major consequence - 8 High risks

**Climate
change**

**Water
quality**

**Coastal
development**

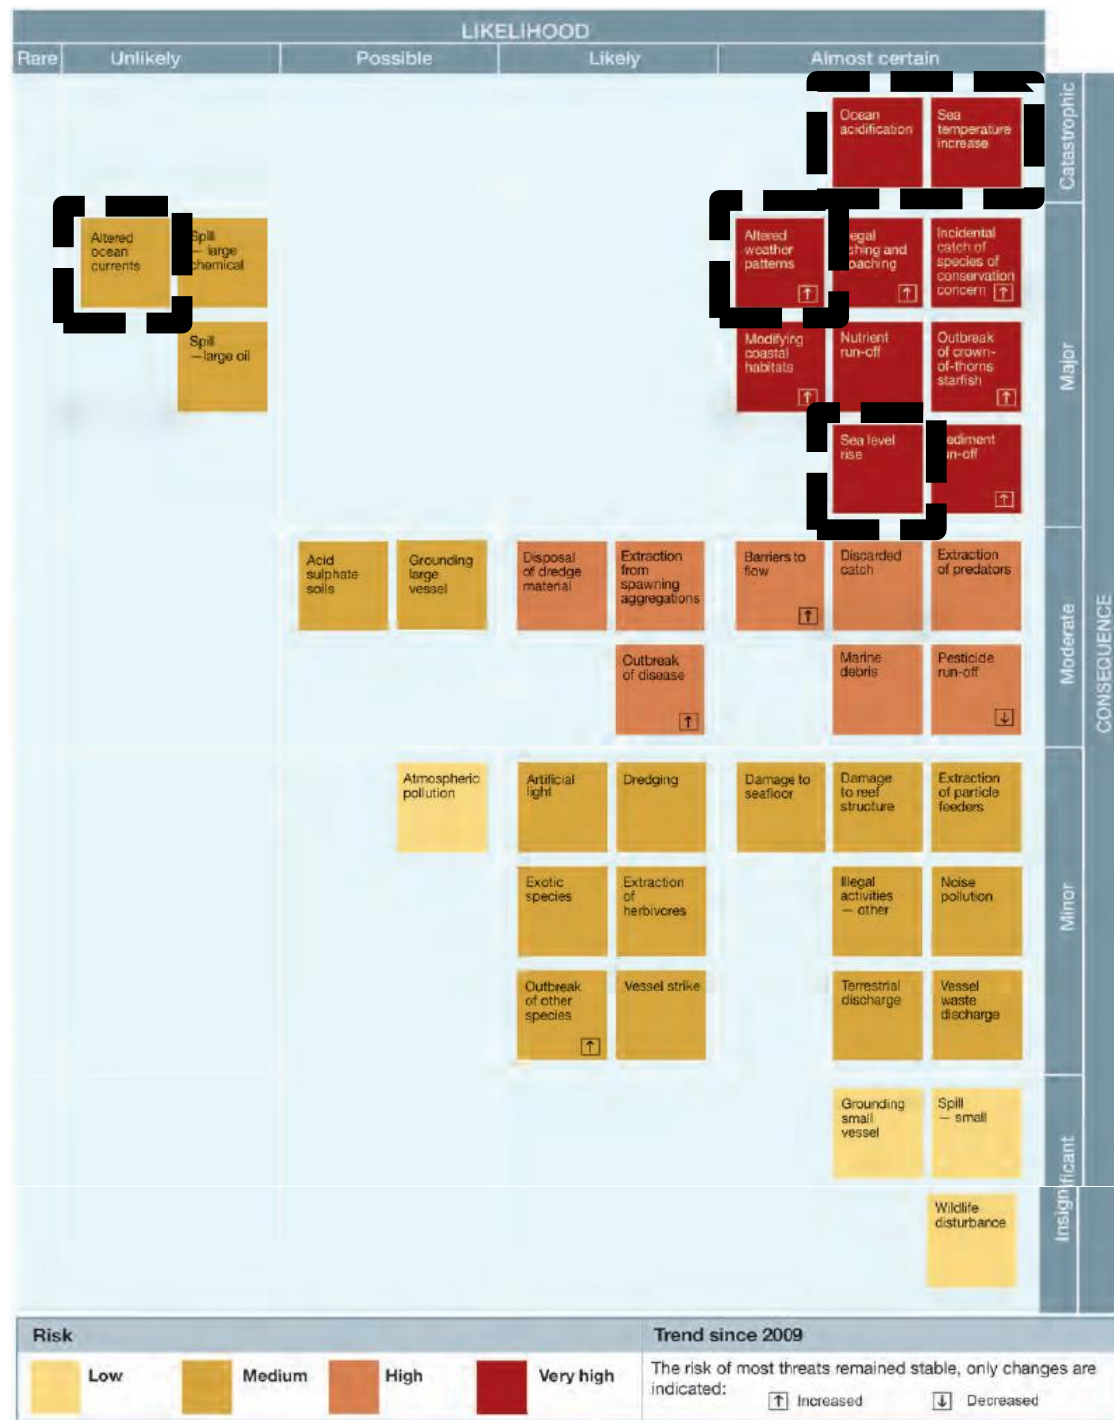

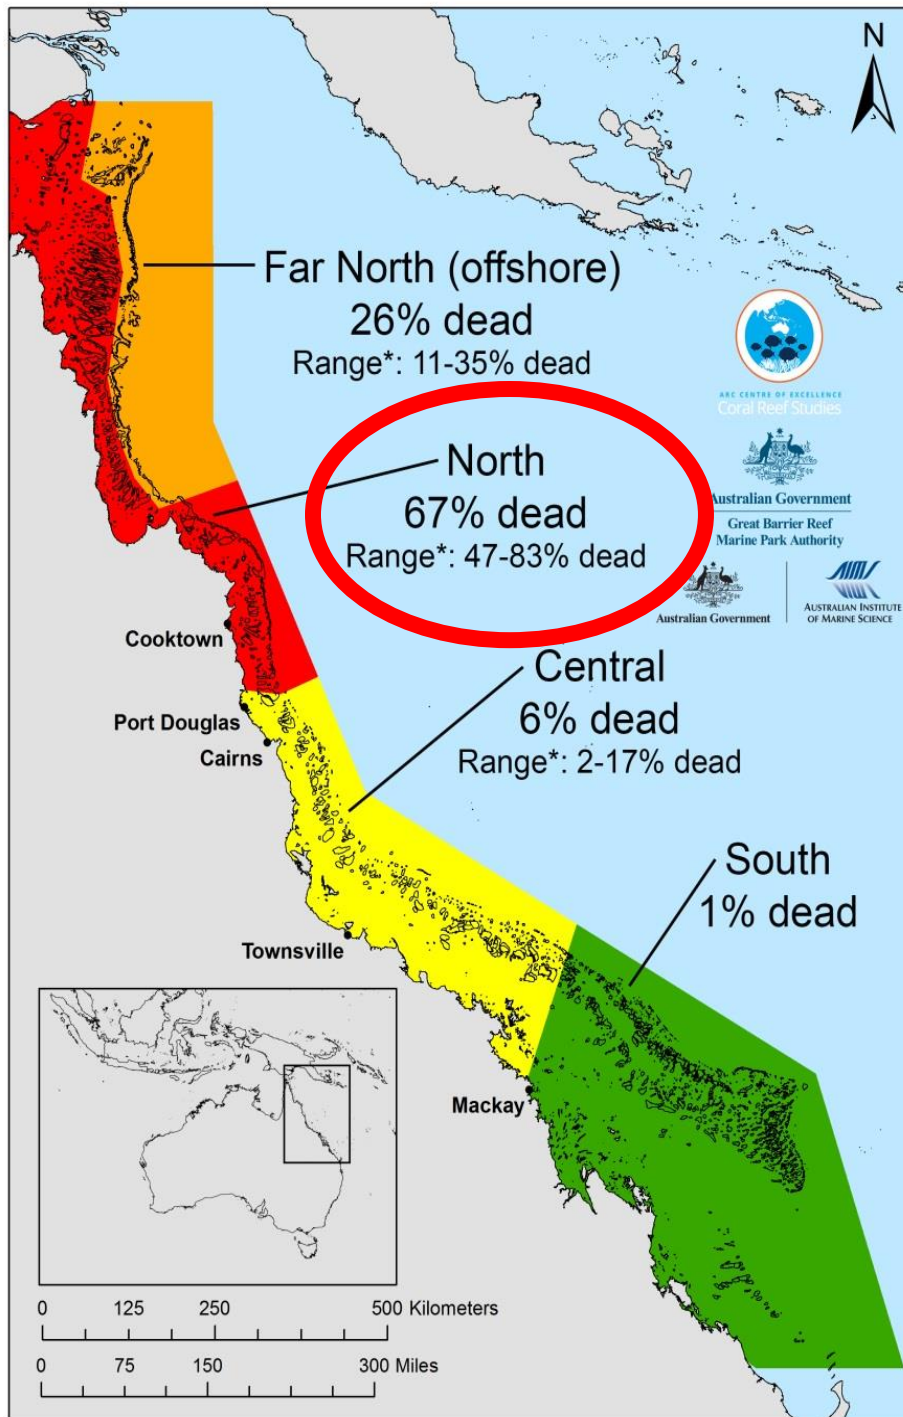

**Unsustainable
fishing
impacts**

Climate change

~ 5 risks

- Ocean acidification
- Sea temp increase
 - Sea level rise
- Altered weather patterns
- Altered ocean currents

Coral mortality across GBR after the 2016 bleaching event

*(the worst such event in
recorded history)*

Adapting management to increase resilience

Declining water quality

~ 8 risks

- Nutrient run-off
- Sediment run-off
- Outbreak of COTS
 - Modifying coastal habitats
- Pesticide run-off
 - Disposal of dredge material
- Vessel waste discharge
 - Terrestrial discharge

Great Barrier Reef Report Card 2015 – overall a 'D'!

Progress to targets

Management practices

Management practices are assessed using their relative water quality risk. Results show the area managed using best management practice systems as at June 2015.

Catchment indicators

Late dry season ground cover^a is reported for 2014-15 for the entire region.

Catchment loads

Modelling of pollutant load reductions is based on reported improvements in management practice systems. Results are an estimate of the annual average reduction in human caused (anthropogenic) pollutant loads at the end of catchments between 2009 and 2015.

2018 Target	90%	90%	90%	90%	70%	50%	20%	60%
-------------	-----	-----	-----	-----	-----	-----	-----	-----

Whitsunday	NA	D 28%	D 31%	C 58%	A* 80%	NA	E 5.5%	E 4.3%
Fitzroy	D 33%	D 42%	C 47%	NA	A 88%	B 31.5%	E 3%	C 38.1%
Burnett Mary	D 33%	D 42%	C 47%	NA	A 88%	B 31.5%	E 3%	C 38.1%

Scoring

A Very good B Good C Moderate D Poor E Very poor ND No data available

Indicator confidence: based on expert opinion and direct measures of error.

Further details on the scoring system and qualitative confidence rankings for each indicator are outlined in the supporting technical information on the Reef Water Quality Protection Plan website, www.reefwater.gov.au/technical.

NA Not applicable in region

C Highlighted scores indicate priority pollutant for region

^a Ground cover monitors pasture and plant litter relative to bare ground across most grazing lands. Areas with very high tree cover are not reported.

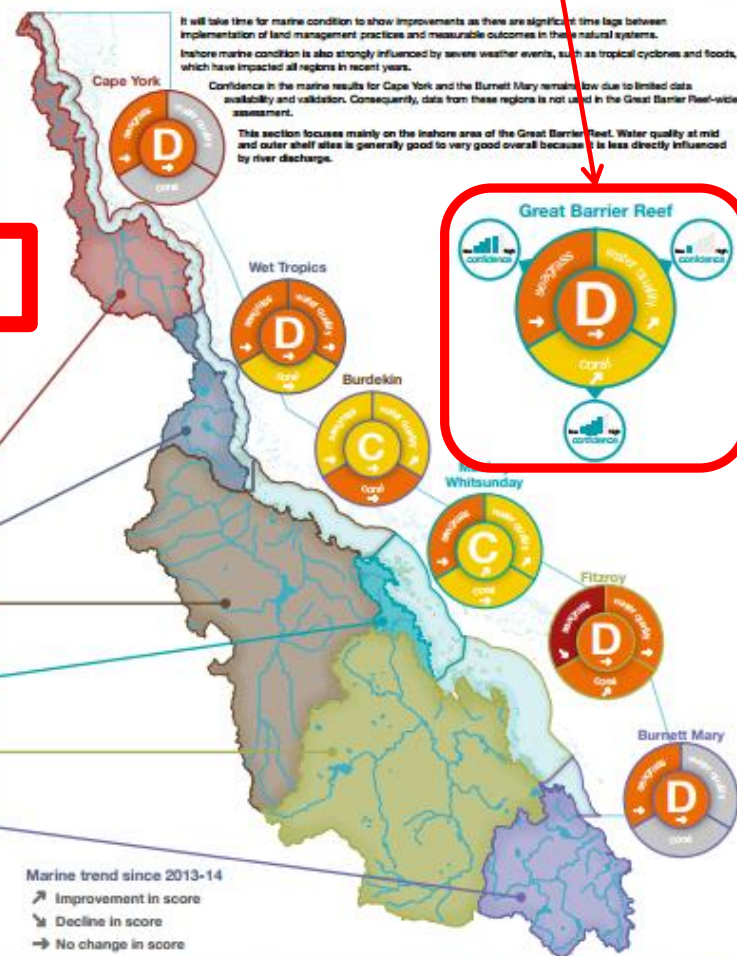

* Significant areas of low ground cover within the Burdekin and Fitzroy regions which were drought-declared.

Inshore marine condition 2014-15

It will take time for marine condition to show improvements as there are significant time lags between implementation of land management practices and measurable outcomes in these natural systems. Inshore marine condition is also strongly influenced by severe weather events, such as tropical cyclones and floods, which have impacted all regions in recent years.

Confidence in the marine results for Cape York and the Burnett Mary remains low due to limited data availability and validation. Consequently, data from these regions is not used in the Great Barrier Reef-wide assessment.

This section focuses mainly on the inshore area of the Great Barrier Reef. Water quality at mid and outer shelf sites is generally good to very good overall because it is less directly influenced by river discharge.

Inshore marine condition 2014-15

Catchment loads

Modelling of pollutant load reductions is based on reported improvements in management practice systems. Results are an estimate of the annual average reduction in human caused (anthropogenic) pollutant loads at the end of catchments between 2009 and 2015.

Great Barrier Reef

Marine trend since 2013-14

Addressing water quality decline

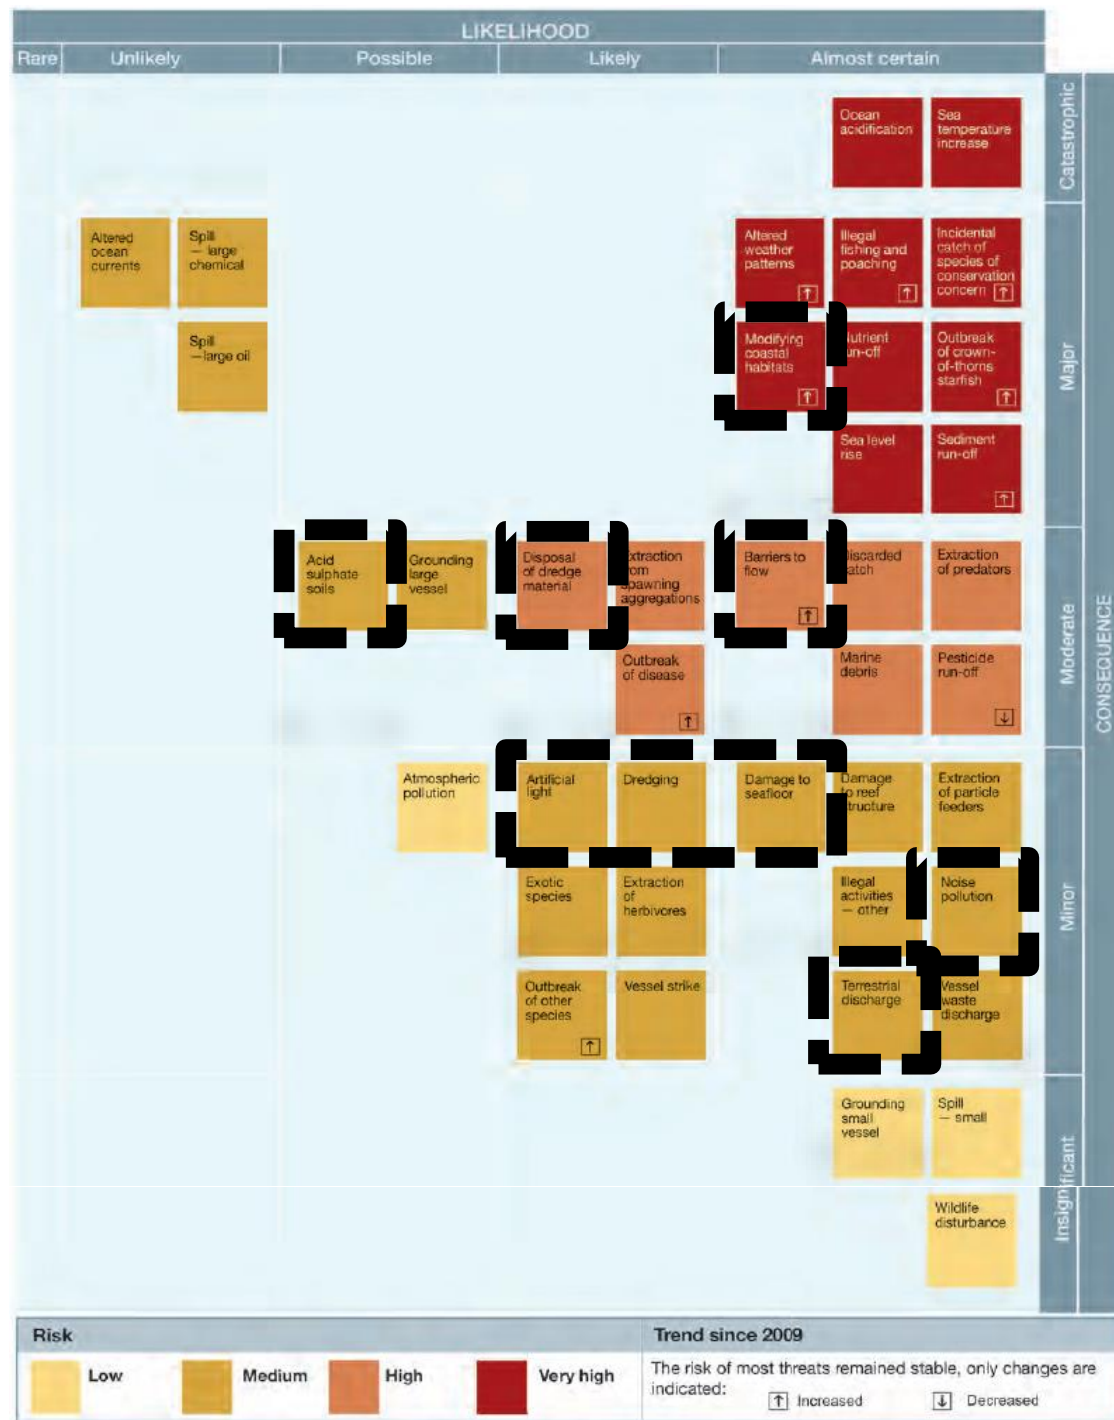

- Australian and Queensland governments -committed to halt and reverse the decline in water quality entering GBR
- GBR Water Quality Guidelines 2010
- Revised *Reef Plan* included regulation
- Working with Regional bodies/Councils on actions and targets

Considerable investment in time and effort ... **but it is far from enough!**

Coastal development impacting coastal habitats

~ 9 risks

- **Modifying coastal habitats**
- Barriers to flow
- Disposal of dredge material
- Acid Sulphate soils
 - Dredging
 - Artificial light
- Damage to seafloor
 - Noise pollution
 - Terrestrial discharge

Coastal developments – *Curtis Island*

**Gladstone
Port 2009**

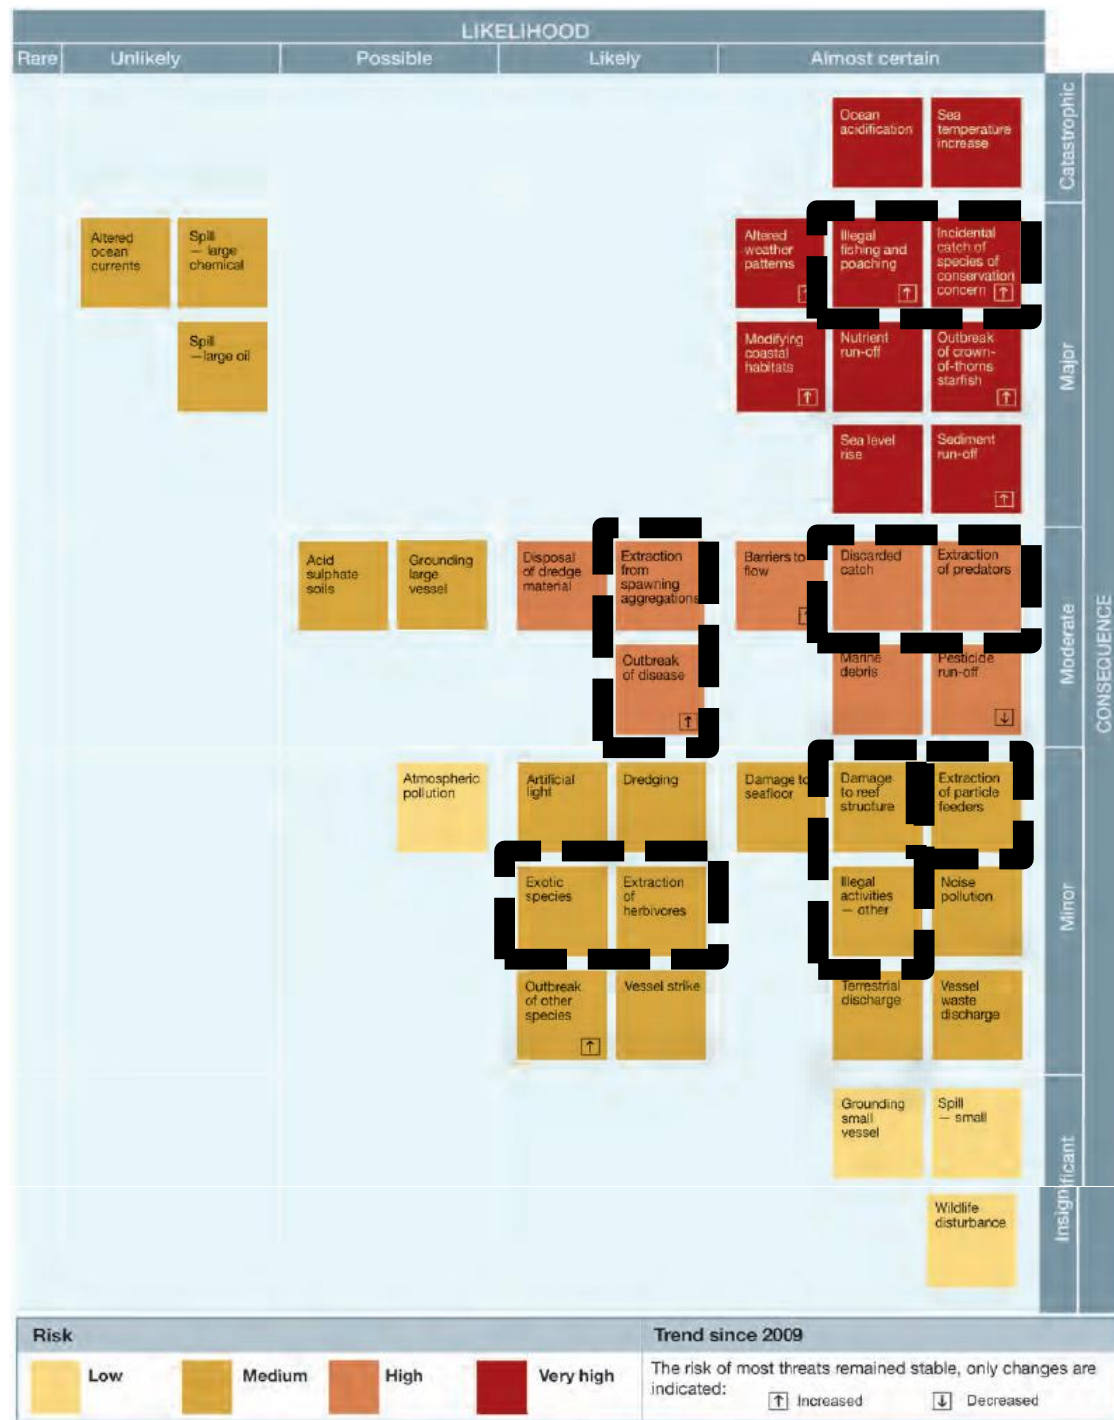

**Gladstone
Port 2016**

Unsustainable fishing impacts

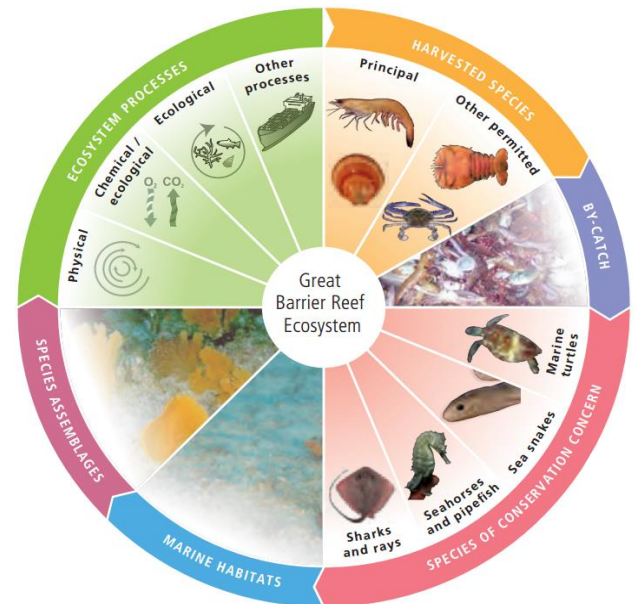

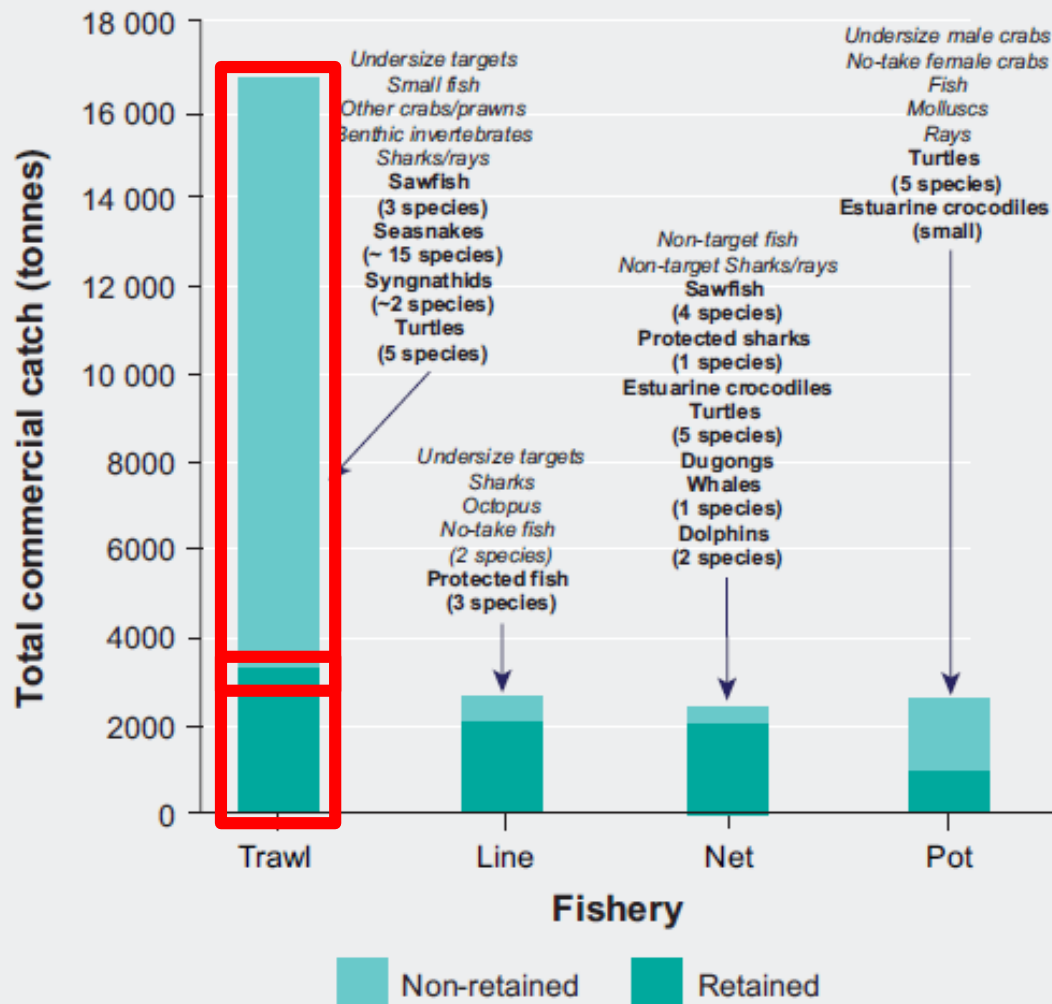

~ 10 risks

- **Illegal fishing and poaching**
- **Incidental catch of species of conservation concern**
- **Extraction of predators**
 - Discarded catch
 - Extraction from spawning aggregations
- **Outbreaks of disease**
- **Extraction of particle feeders**
- **Extraction of herbivores**
 - Damage to reef structures
- **Introduction of exotic species**

Breakdown of commercial fisheries catch in GBR

(*Outlook Report, 2009*)

Ecological Risk Assessment of the East Coast Trawl Fishery

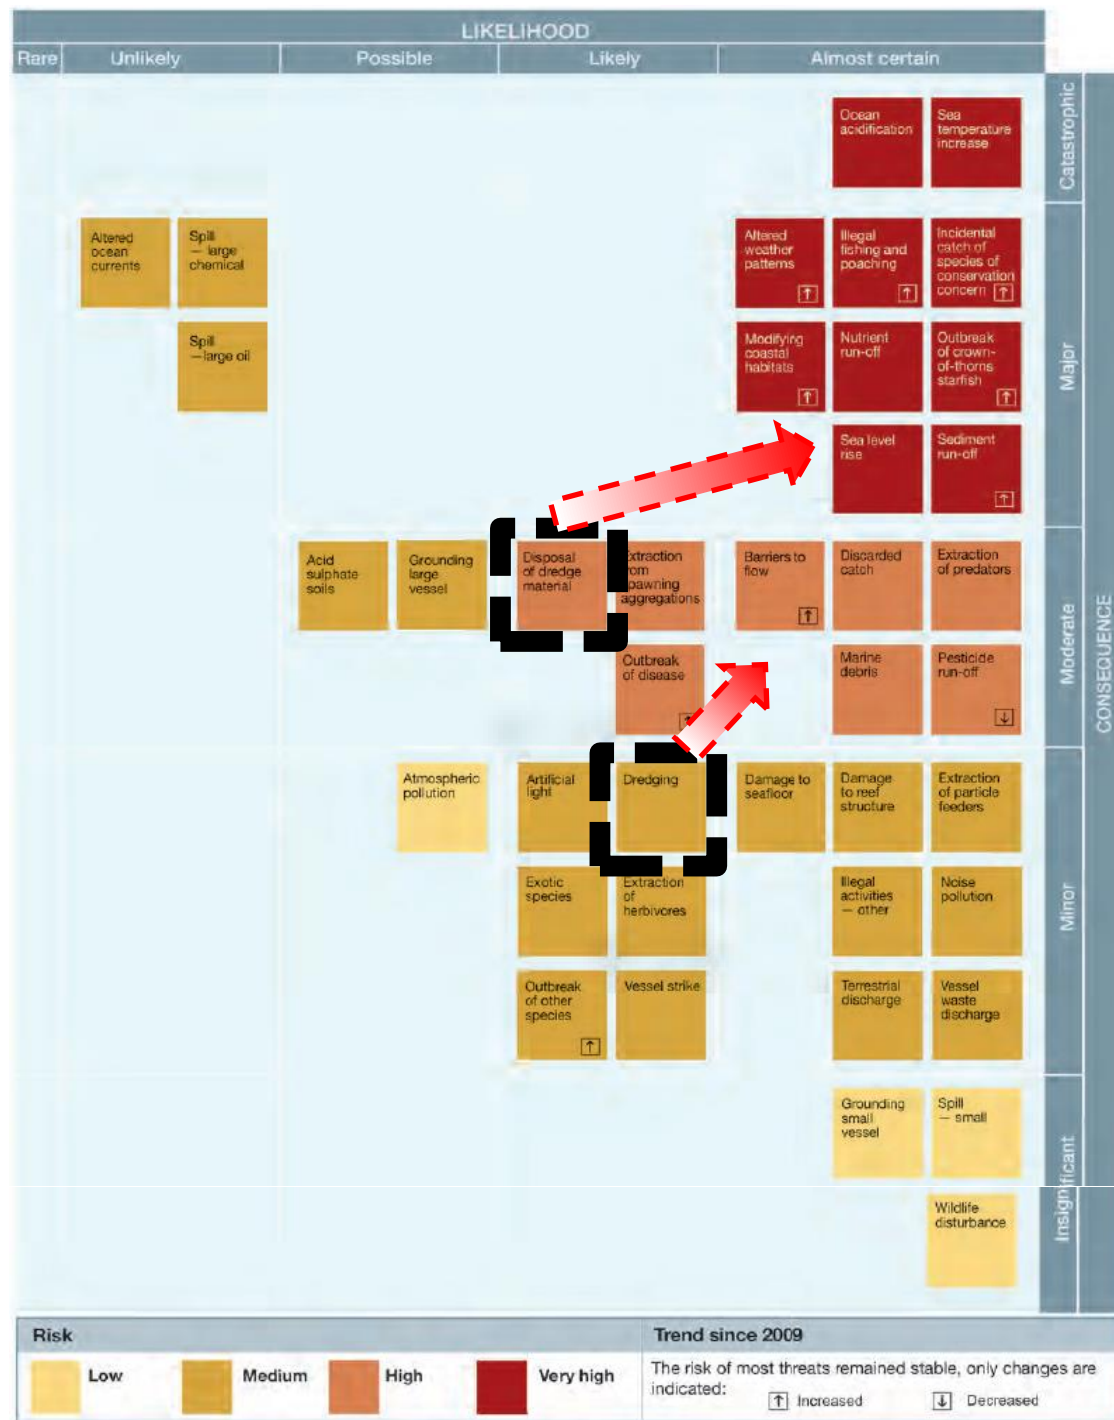

(*Pears et al 2014*)

Dredging and spoil dumping

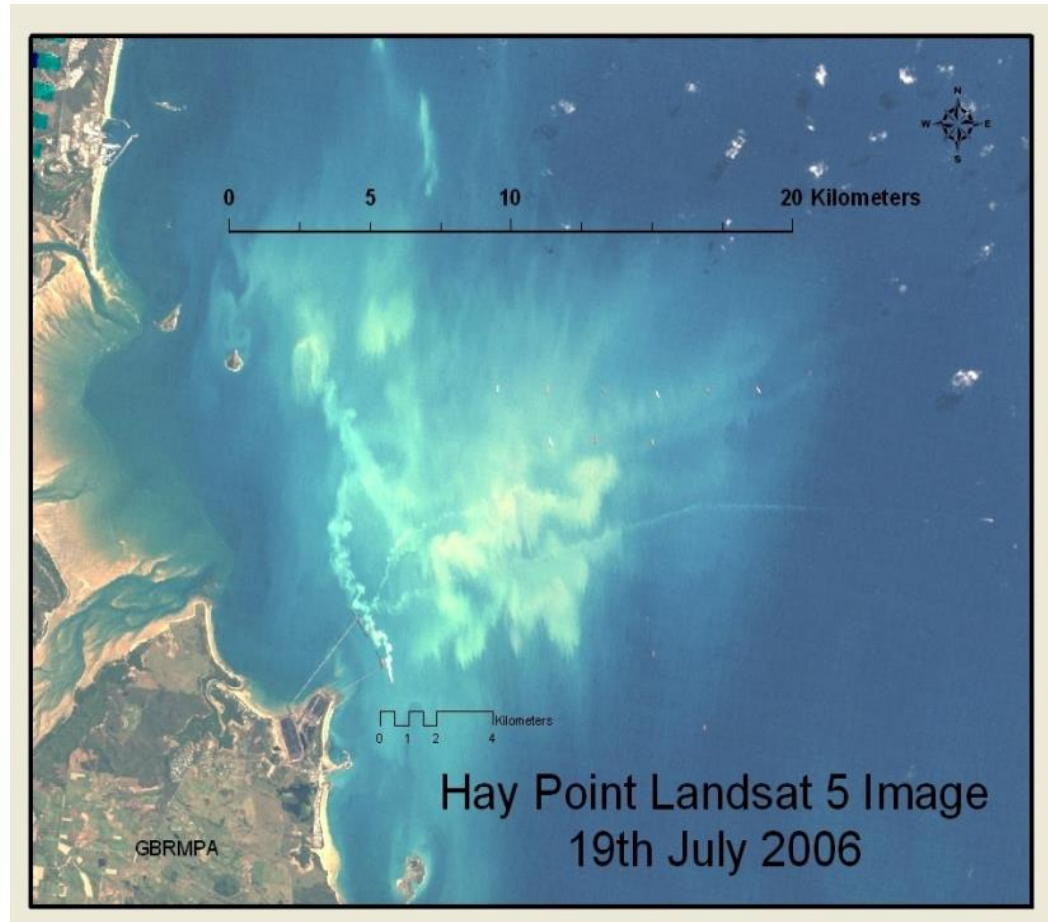

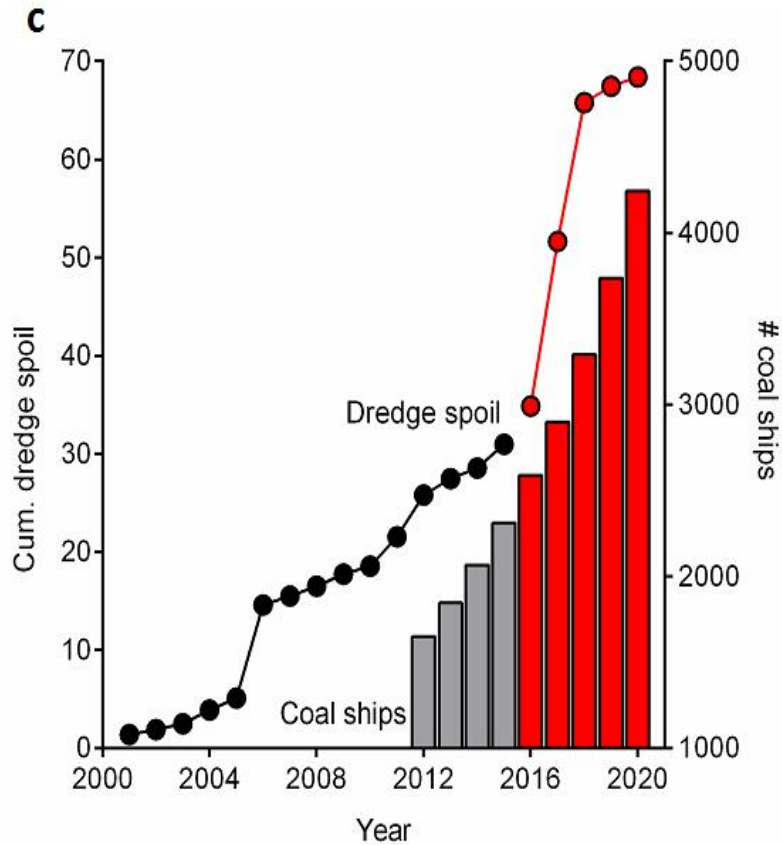

~ 2 risks

- Disposal of dredge material
- Dredging

... but risk levels probably need to be elevated to 'Almost certain', along with increased consequences

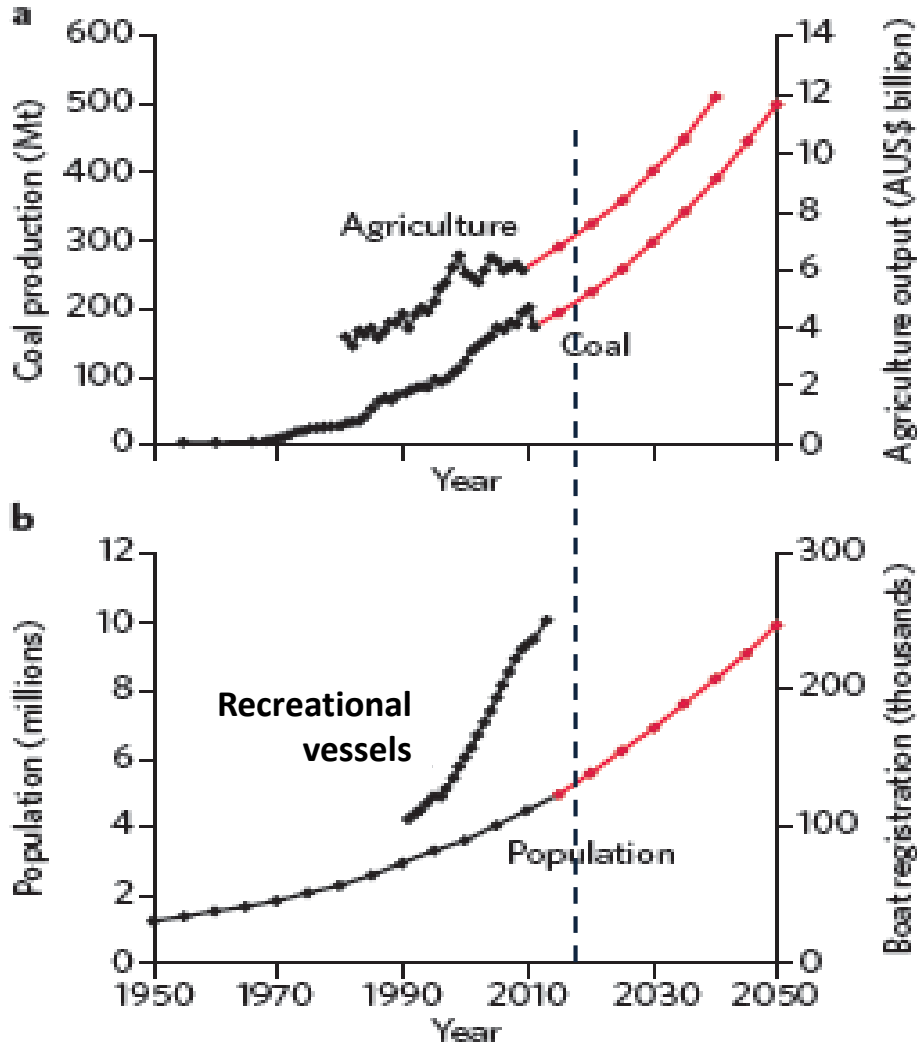

Port dredging and dumpingand coal ships

Long-term changes in stressors affecting GBR

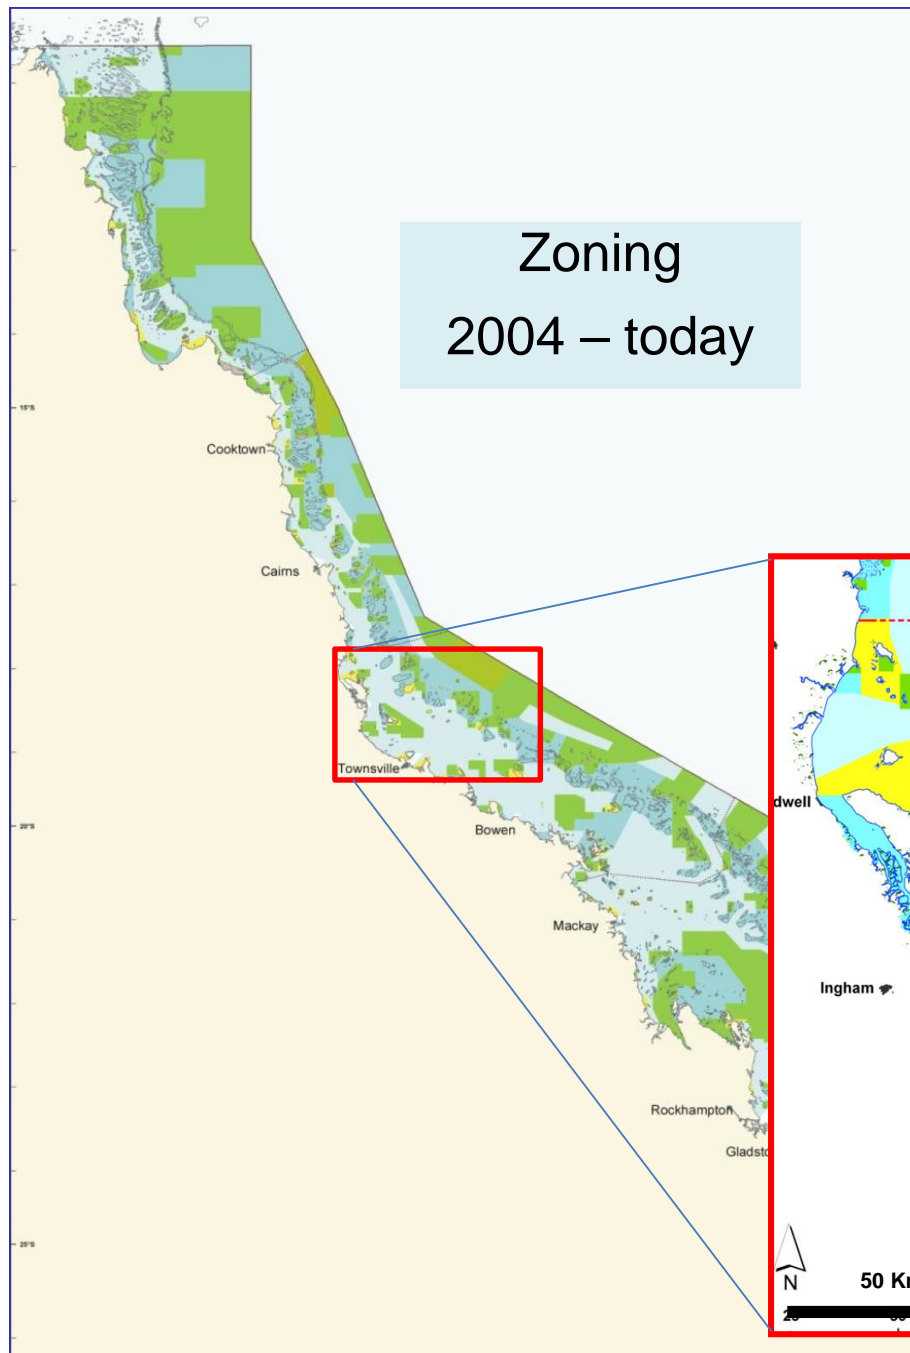

Observed changes (black); projected changes (red)

Coal production is growing rapidly – projected to treble by 2050

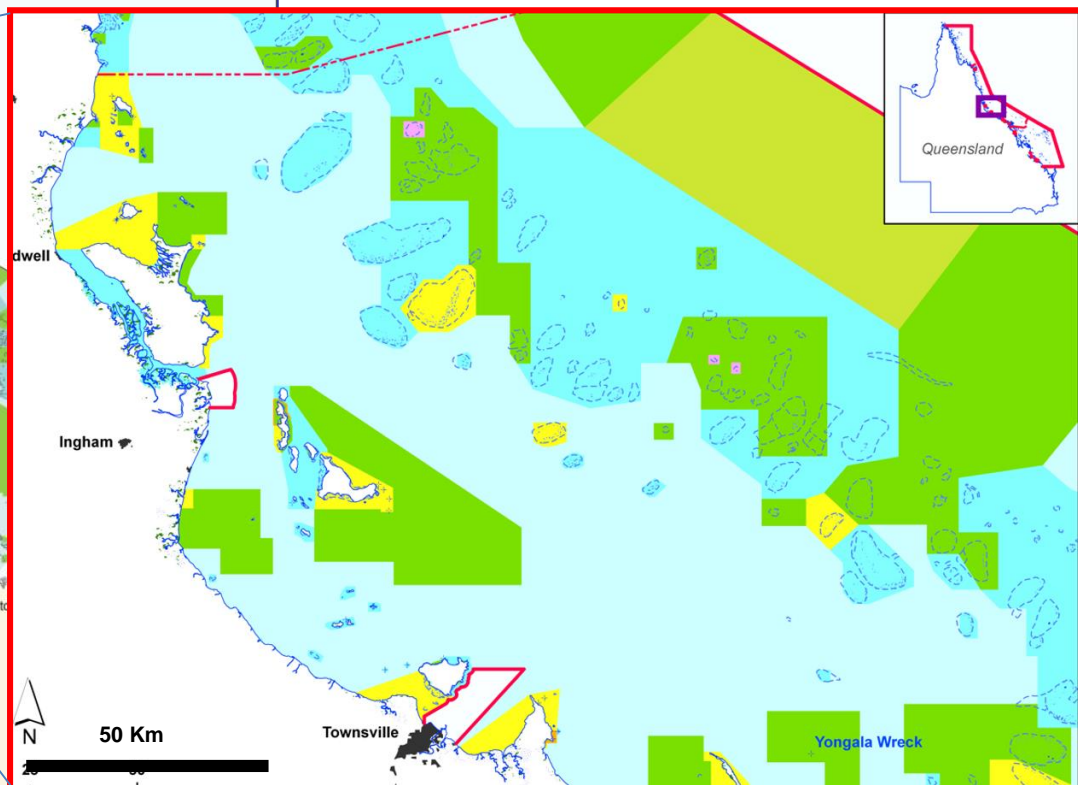

QLD population is growing rapidly – projected to double by 2050

Zoning 2004 – today

ACTIVITIES GUIDE (see Zoning Plan for details)

	General Use Zone	Habitat Protection Zone	Conservation Park Zone	Buffer Zone	Scientific Research Zone	Marine National Park Zone	Preservation Zone
Aquaculture	Permit	Permit	Permit ¹	×	×	×	×
Bait netting	✓	✓	✓	×	×	×	×
Boating, diving, photography	✓	✓	✓ ²	×	✓ ²	×	×
Crabbing	✓	✓	✓ ³	×	×	×	×
Harvest fishing for aquarium fish, coral and beachworm	Permit	Permit	Permit ¹	×	×	×	×
Harvest fishing for sea cucumber, trochus, tropical rock lobster	Permit	Permit	×	×	×	×	×
Limited collecting	✓ ⁴	✓ ⁴	✓ ⁴	×	×	×	×
Limited impact research	✓	✓	✓ ⁴	✓ ⁵	✓	✓ ⁵	Permit
Limited spearfishing (snorkel only)	✓	✓	✓ ¹	×	×	×	×
Line fishing	✓ ⁶	✓ ⁶	✓ ⁷	×	×	×	×
Netting (other than bait netting)	✓	✓	×	×	×	×	×
Research (other than limited impact)	Permit	Permit	Permit	Permit	Permit	Permit	Permit
Shipping (other than in a designated shipping area)	✓	Permit	Permit	Permit	Permit	Permit	×
Tourism program	Permit	Permit	Permit	Permit	Permit	Permit	×
Traditional use of marine resources	✓ ⁸	✓ ⁸	✓ ⁸	✓ ⁸	✓ ⁸	✓ ⁸	×
Trawling	✓	×	×	×	×	×	×
Trolling	✓ ⁶	✓ ⁶	✓ ⁶	✓ ^{6,9}	×	×	×

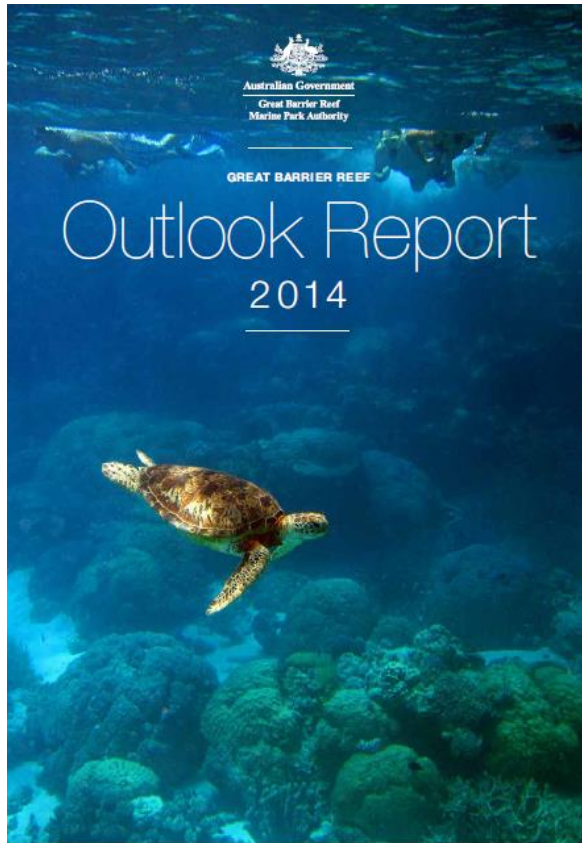

Zoning does not address all the pressures

- **Water Quality** – zoning does not apply outside the marine area where most WQ issues arise
- **Fishing impacts** – zoning addresses some but not all unsustainable fishing impacts
- **Coastal developments, especially ports** – zoning does not apply to ports that are outside the marine park
- **Shipping and pollution incidents** – the zoning plan helps by delineating shipping lanes but does not address ship groundings/pollution
- **Increasing population growth & recreation** – zoning does not address key issues
- **Climate change** – zoning can help build resilience, but does not address acidification or rising sea temperatures

Cumulative impacts

GBR Outlook Report 2014

*“Even with the recent management initiatives to reduce threats and improve resilience, **the overall outlook for the Great Barrier Reef is poor, has worsened since 2009 and is expected to further deteriorate in the future**”.*

(Executive summary, p. iv)

The future....?

- GBR is under unprecedented pressures (*similarly for most MPAs world-wide*) :
 - natural
 - man-made
- Biggest threat is cumulative pressures (both direct and indirect)
- Many pressures are likely to increase
- GBRMPA needs to prioritize its management in response to these pressures
- A possibility of GBR being listed as ‘World Heritage in Danger’?

Thank you
